

Portfolio Management Enabled by the Preclarus® Scorecard Dashboard

Enabling Faster Insights to Improve Clinical Study Efficiency and Quality
 Gain a holistic view of your portfolio's performance and facilitate your relationship with PPD. Keeping score has never been this easy or effective.

Your studies have countless moving parts. You need to know how well they are working together to achieve specific goals and milestones. The Preclarus® scorecard helps executive management successfully navigate the complexities of portfolio and relationship management. You can maximize performance by objectively managing relationships across your entire book of business by therapeutic area, phase and status.

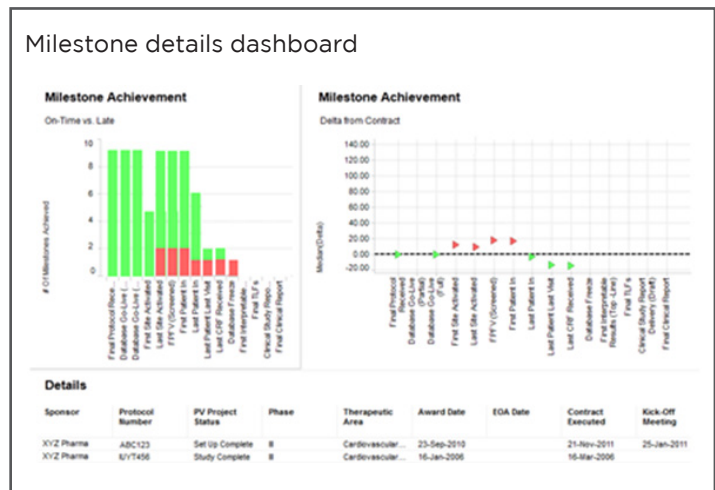

Preclarus is revolutionizing the drug development process, delivering the information you need when you need it. As the engine that drives early recognition of trends and risks, Preclarus clears the path for more immediate, effective decisions and actions that improve study quality and efficiency and optimize clinical evaluation.

Near real-time data is mined from key data systems including: PPD® CTMS (clinical trial management system); PPD® Project View, which is PPD's project management system; PPD safety tracking system (STS); and electronic data capture/collection (EDC) system(s). It is then integrated and transformed to give you a clear and accurate picture of your portfolio's progress and risk profile, which allows you to easily identify actionable trends.

Enhanced collaboration and transparency

The Preclarus scorecard is designed to be a collaboration tool aimed at managing strategic relationships cooperatively to measure service delivery against contractual commitments across large portfolios of work. Client and PPD study operations teams can utilize

insights gained from the scorecard for executive joint oversight meetings and internal program oversight. Critical discussions regarding specific risks and issues that might impact the progress of your studies are facilitated through the scorecard.

Actionable intelligence

Using the Preclarus scorecard, you can access detailed reporting of executive roll-up metrics and progress reports of contractual requirements for high-level views in addition to granular detail views and exports as needed. You can quickly and easily identify operational areas of excellence as well as opportunities for improvement. With access to key performance indicators (KPI) in one convenient dashboard, you can:

- Determine progress toward milestones to identify delays
- Compare performance across therapeutic areas

- Predict more accurately when study achievements will occur
- Compare risk and quality indicators across and within studies
