

Expertise in IBS Clinical Trial Delivery

Partner with PPD to successfully deliver IBS Studies

PPD, part of Thermo Fisher Scientific, is dedicated to working closely with our clients to advance their treatments for Irritable Bowel Syndrome (IBS). Given the current development landscape, the prevalence of IBS globally, and all the IBS Subtype, recruitment for IBS faces strong competition and potentially lower enrollment rate.

PPD has significant experience conducting IBS trials, which includes involvement in the development of the majority of drugs for IBS that are currently marketed. PPD has conducted 17 studies in IBS, involving over 1,500 sites and more than 7,100 patients.

17 IBS Phase II-III studies in the past 5 years recruiting **7,100+ patients**.

1,561 global sites in our global database with associated metrics. **+1.1 Million+ patients** (all IBS subtype) in AES database.

IBS-experienced operations staff, including in-house gastroenterologists.

Leader in digital solutions – Reduce patient burden, promote patient retention, and drive high patient data compliance.

PPD's PROVEN TRACK RECORD

Increased Site Engagement

Quick Site Activations

High Enrollment Rates

Quality Data

Experience in Site Identification, Engagement and Performance

- A strategy to work at risk and activate high-enrolling, PPD known sites to ensure successful study execution
- Leveraging established patient recruitment tactics in the IBS population
- Understanding of the medical, clinical, and regulatory requirements for IBS studies, as well as protocol design and IBS entry criteria
- Experience with different types of IBS studies—pain management and effect on bowel movement frequency
- Vast experience with key sites and investigators allows PPD to make study top priority
- Digital Solution for Subject reported outcome driven

PPD has deep expertise in IBS Study and proven success stories Including involvement in the development of the majority of new marketed drugs within the last 5 years
