

Biotech solutions

Seamless project delivery for biotech trials

Flawless execution. Accelerated timelines.
A CRO partner that moves with you.

In biotech, the path from protocol to proof is narrow and every delay can cost critical momentum. That's why more biotech sponsors are choosing the PPD™ clinical research business of Thermo Fisher Scientific to deliver clinical trials with precision, speed, and seamless coordination.

We don't just manage trials—we orchestrate them. With biotech-focused teams, integrated systems, and unmatched operational continuity, we turn complex clinical plans into flawlessly executed projects that stay on timeline, on budget, and on point.

Find perfect chemistry in delivery

Every biotech needs a provider of CRO services, but not every CRO partner understands the urgency, agility, and intensity required to bring a biotech trial to life. From day one, our PPD™ Biotech solutions team delivers flawless alignment between your strategic goals and execution plans. Our team becomes an extension of yours—locked in, fully accountable, and deeply invested in your success.

10–20% faster start-up than industry benchmark

Rapid execution begins with rapid site start-up. Over the past 2 years, our average site activation timelines have outpaced CRO industry standards by 10–20%, measured from Final Protocol to First Site Active.

How we do it:

- Early engagement of global regulatory and ethics committees
- Streamlined feasibility, contracting and site activation workflows
- Established investigator networks across 50,000+ sites worldwide

This acceleration ensures your study begins with full momentum and stays ahead of plan.

Project delivery without the hand-offs

With PPD™ Biotech solutions, there's no “reset” after each phase or milestone. We design our teams, timelines and tools around one goal: delivery without disruption.

Dedicated project teams

- Consistent staffing with industry-leading retention
- Fewer hand-offs, less rework and no learning curve loss
- White-glove service from start-up through database lock

Expert oversight at every stage

- Executive sponsor alignment on every biotech engagement
- Built-in risk management to anticipate and solve problems early
- Real-time communication, dashboards and performance visibility

Integrated clinical infrastructure

- In-house data management, biostats and medical writing
- Regulatory consulting aligned to global requirements
- Exclusive access to Thermo Fisher CDMO, lab and supply services

Biotech-first, outcome-focused

Our biotech clients return again and again because we deliver where it matters most.
